0 – 6mm Recycled Glass – Block Paving Sand

Resource: Crushed Recycled Glass

Contractor: Highgate Homes

Contract: Private Housing development

This trial was carried out to investigate the performance of 0 - 6mm glass as an alternative to natural sands for block paving.

Following site inspection with the contractor and local authority there was found to be no indication of deformation or block displacement on both the trial areas using 0 - 6mm glass.

It was noted that in the area where blocks had been laid using 0 - 6mm glass there was little sign of organic growth between the block joints. Whereas in some cases, with paving laid on sands, growth of weed, moss and grass can be found between the paving blocks.
