

L&S

ECOblock

L&S is a leading producer of a multi-purpose interlocking concrete block. The L&S ECOblock is not only produced from 100% recycled aggregate it also has an added bonus in the fact that the units are reusable. This means you can re-site them easily and they can be earmarked for other uses instead of having to dispose of them.

The L&S ECOblock is ideal for creating temporary road blocks, protecting vacant sites from unwanted visitors, preventing fly tipping and site security. The system can also be used for constructing silage clamps or storage bays of various sizes.

The units come in a range of sizes, from the standard 1500mm x 600mm x 600mm unit (weight 1080kgs), a 900mm x 600mm x 600mm unit (weight 648kgs) and a 600mm x 600mm x 600mm unit (weight 432kgs). This provides a system with the flexibility to construct an array of structures.

Once the first delivery vehicle has unloaded and built the first section of walling, successive loads can then repeat the process until the structure is complete.

Nationwide deliveries
